Secondary: 336412 336413

Capabilities Statement

Logic Air provides customized aircraft modification including engineering, kit fabrication, on-site embodiment, and STC's. We are Transport Canada, FAA and EASA certified. Our mobile installation team can accommodate on-site aircraft maintenance, repair, and modification to assist operators with service bulletins, AD, and STC's.

At Corporation Logic Air Inc, our capabilities include: equipment maintenance and repair, sheet metal fabrication, manufacturing, scheduled (i.e.: FDR, CVR, ADC, Transponder calibration, etc.) and unscheduled maintenance (repair recovery).

We specialize in developing solutions for our customers' complex requirements in the introduction of aircraft systems such as: GPS (SBAS/LPV), FANS, ADS-B, TCAS, IFE, EGPWS, SATCOM and others. Our fully autonomous mobile team can be dispatched to assist customers in almost any location in the world.

Core Competencies

- Development of STC's
- Aircraft Interior Reconfiguration
- Installation of Navigational & Communication Systems
- SBAS Landing System
- Component Repair
- Aircraft Line Maintenance
- Structural Repair and Sheet Metal Fabrication

Differentiators

Logic Air prides itself in its versatility, cost-effectiveness and the fact that our customers are repeat customers. We have experience on a wide variety of aircraft including but not limited to: B737 Classic and NG, B767, A310, A330, Dash-8.
